1 Overview

1.1 Introduction

The J6 is a NovaStar's high-performance seamless switcher that integrates video processing, screen mosaic, transition effects and multi-screen display capabilities. The J6 offers powerful video signal receiving and processing abilities and supports up to 8 inputs with the resolution up to 4K×2K@30Hz and 6 layers. In addition, this product supports two system modes: Splicer and Switcher. When it is in Splicer mode, a maximum of 4 DVI output connectors can be used together for output, which can realize an up to 8KK loading capacity of each J6 unit. When it is in Switcher mode, a maximum of 2 DVI output connectors can be used together for output, which can realize an up to 4KK loading capacity of each J6 unit.

Based on a powerful FPGA platform, the J6 supports input and output EDID management and color adjustment, seamless transition on a variety of input sources, as well as fade and other transition effects, bringing you a more flexible and rich visual experience.

What's more, the J6 is equipped with NovaStar's smart control software V-Can and C1 event controller, allowing for a rich screen mosaic effect via V-Can, C1 or front panel operations. With excellent image quality, ultra-large loading capacity and flexible operation modes, the J6 can be widely used in conference reports, exhibition centers, stage control and other application scenarios.

1.2 Features

- Industry-standard input connectors
 - DVI connector: 1920×1080@60Hz input
 - HDMI 1.3 connector: 1920×1080@60Hz input
 - 3G-SDI connector: 1920×1080@60Hz input
 - DP 1.1 connector: 4K×2K@30Hz input
 - HDMI 1.4 connector: 4K×2K@30Hz input
- 4 groups (2 connectors in each group) of DVI output connectors of a single J6 unit for mosaic output

Each group includes a main connector and a backup connector. A maximum of 4 connectors can be used for mosaic output. The mosaic layout can be 4×1, 1×4 or 2×2. The maximum loading capacity can reach 9,200,000 pixels and the maximum mosaic width can be up to 15360 pixels.
- Dual system modes

Supports both Splicer and Switcher modes, which can meet different application requirements.
- Multiple layer display

Supports up to 6x 4K×2K layers that can be positioned freely and cross connector output.

Supports layer border settings.
- HDMI connector dedicated for output monitoring
 - Supports monitoring of a single input source, PVW or PGM.
 - Supports mixed monitoring of all input sources, PVW and PGM.
 - Supports displaying of input resolution and refresh rate.
- Display control function

Makes the screen fade to black or freeze the screen by simply clicking one button.
- EDID management

Supports input resolution management on DVI, HDMI and DP connectors.
- Transition effects

In Splicer mode, the device supports the setting of transition effect for source and preset switching.

In Switcher mode, the device supports the setting of Take effect and effect duration.
- BKG capturing

Supports the capturing of input source and PGM, and the captured image can be used as BKG.
- BKG image and pure color BKG

Supports both image BKG and pure color BKG. Up to 6 BKG images are supported.

- Adjustable input color, layer color and output color
- Preset management

Up to 10 presets are supported and the preset can be loaded simply by clicking one button.

- Layer layout management

The device is built-in with 7 layer layouts. You can load one of the layer layouts to quickly lay out the layers.

- Multiple operation modes

The device can be controlled via its front panel, the smart control software V-Can or C1 event controller.

- Multiple J6 units controlled by one C1 unit

You can perform operations, such as FTB, freeze or Take operation, to multiple J6 units on the C1.

- AUX

In Switcher mode, the device supports the AUX function.

- Intuitive LCD screen and clear button indicators on front panel, simplifying system control operations

		<p>enter the test pattern menu.</p> <ul style="list-style-type: none"> • FN/TAKE: The function of this button varies in different system modes (Splicer and Switcher). <ul style="list-style-type: none"> – In Splicer mode, press the button to enter the menu of the function that has been customized for Fn button. Hold down the button to enter the FN settings menu. – In Switcher mode, press the button to send PVW to PGM.

2.2 Rear Panel

Notes:

- The J6 provides two default configurations that differ in Input-F and Input-G connectors on the rear panel.
- DP 1.1 and HDMI 1.4 connectors support at most 2 layers. Other connectors support at most 6 layers.

Input		
No.	Connector	Description
INPUT-A	DP 1.1	<p>Input resolution up to 3840×2160@30Hz and custom EDID supported HDCP 1.3 compliant</p> <p>Interchangeable with HDMI 1.4 input card (Input resolution up to 3840×2160@30Hz and custom EDID supported, HDCP 1.4 compliant)</p> <p>Does not support interlaced signal inputs.</p>

3 Applications

The J6 supports dual system modes: Splicer and Switcher. The connections for two modes are shown in Figure 3-1 and Figure 3-2.

Figure 3-1 Connections for Splicer mode

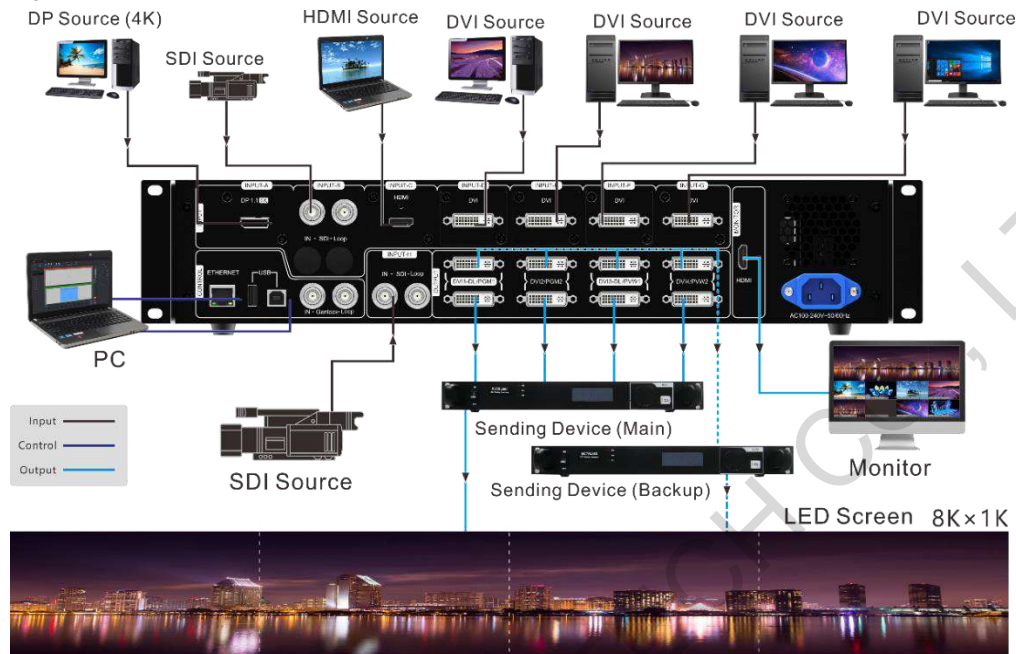

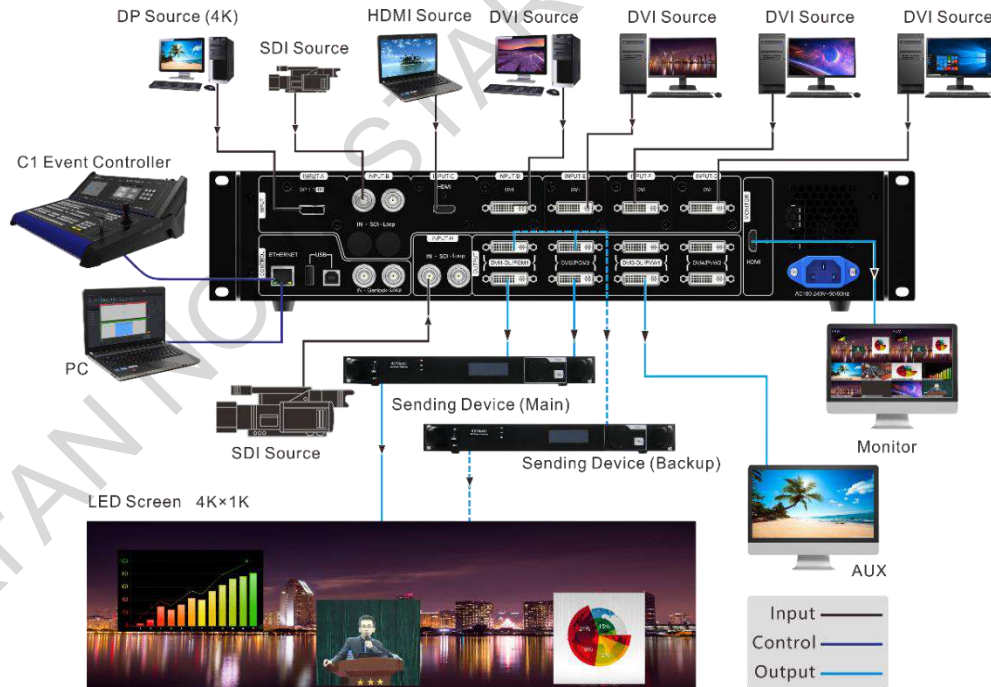

Figure 3-2 Connections for Switcher mode

Note:

This product can only be worked horizontally. Wall mounting is not permitted.

4 Menu Operations

4.1 Operation Instructions

Knob

- On the home screen, pressing the knob enters the operation menu screen.
- On the operation menu screen, rotating the knob selects a menu item, and pressing the knob confirms the selection or enters the submenu.
- When a menu item with parameters is selected, you can rotate the knob to adjust the parameters. Please note that after adjustment, you need to press the knob again to confirm the adjustment.

ESC

Press the button to exit the current menu or cancel the operation.

Button Lock and Unlock

Hold down the knob and ESC button simultaneously for 5s or longer to lock or unlock all the buttons.

4.2 Home Screen

After the device is powered on, the home screen is shown in Figure 4-1 and the home screen descriptions are shown in Table 4-1.

Figure 4-1 Home screen

On the home screen, press the knob to enter the menu screen as shown in [Figure 4-2](#).

Figure 4-2 Main menu

4.3 Screen Settings

On the main menu screen, rotate the knob to select **Screen Settings** where you can set the output mode, screen layout, output resolution as well as the width and height of the screen area loaded by a certain output connector.

Figure 4-3 Screen layout

4.3.1 Output Mode

The four groups of DVI connectors can be configured as single link DVI or dual link DVI. When the output mode is different, the connection of the device output connector is different.

- Output Mode: SL

The DVI connector is set to single link mode. The connector connection will vary according to the System Mode.

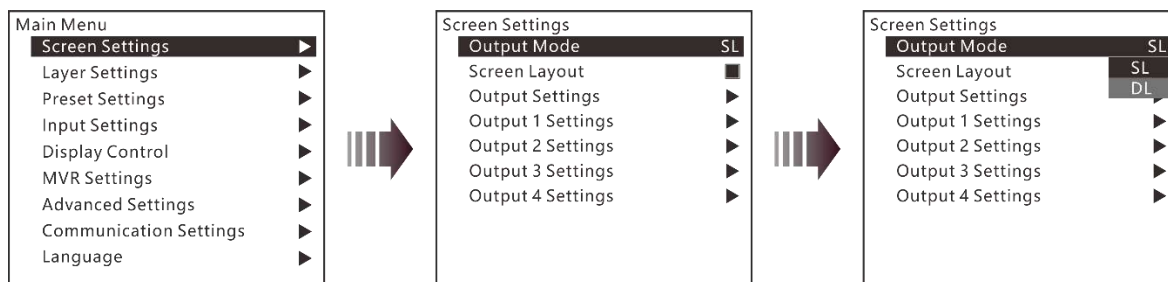

- When the **System Mode** is **Splicer**, four DVI connectors are all used as output connectors.
- When the **System Mode** is **Switcher**, DVI 1 and DVI 2 are used as output connectors, while DVI 3 and DVI 4 are unavailable.

- Output Mode: DL

The DVI connector is set to dual link mode. The connector connection will vary according to the System Mode.

- When the **System Mode** is **Splicer**, DVI 1 and DVI 3 are used as output connectors, while DVI 2 and DVI 4 are unavailable.
- When the **System Mode** is **Switcher**, DVI 1 is used as an output connector, DVI 3 is used for AUX, but DVI 2 and DVI 4 are unavailable.

Figure 4-4 Output mode

4.3.2 Screen Layout

The screen layout is the screen mosaic mode. The screen layout will vary according to **Output Mode** and **System Mode**.

- System mode: Splicer

- When the **Output Mode** is **SL**, the following 8 screen layouts are supported.

- When the **Output Mode** is **DL**, the following 3 screen layouts are supported.

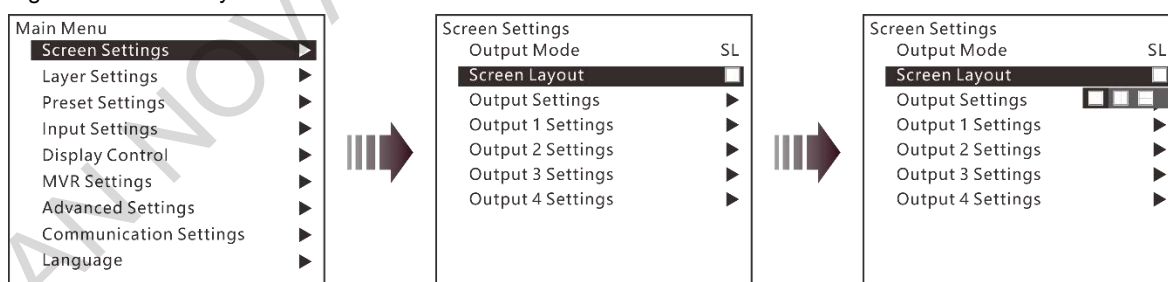

- System mode: Switcher

- When the **Output Mode** is **SL**, the following 3 screen layouts are supported.

- When the **Output Mode** is **DL**, only **1x1** screen layout is supported.

Figure 4-5 Screen layout

4.3.3 Output Settings

Output settings allow you to set the output resolution of the DVI output connector. Standard resolutions and custom resolutions are both supported.

- Output Mode: SL

Output resolution is 1920×1080 and refresh rate is 60 Hz. Custom width range is 600–3840. Custom height range is 600–3518. Refresh rate range is 24 Hz–120 Hz.

- Output Mode: DL

Output resolution is 1920×1080. Refresh rate is 60 Hz. Custom width range is 1200–7680. Custom height range is 600–3579. Refresh rate range is 24 Hz–120 Hz.

Figure 4-6 Standard resolution

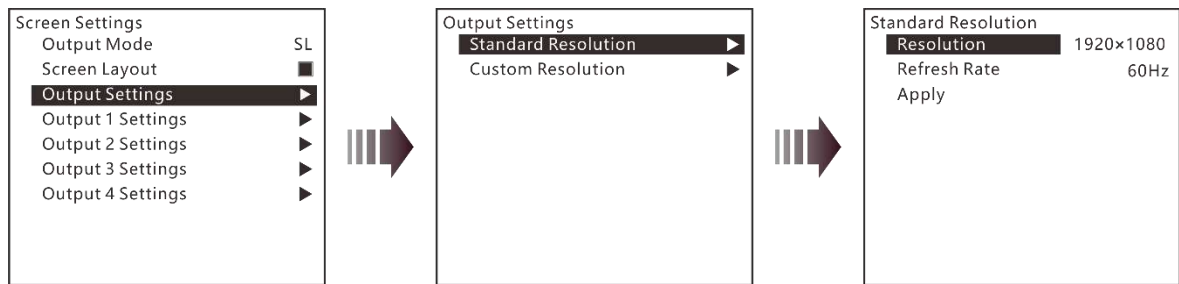

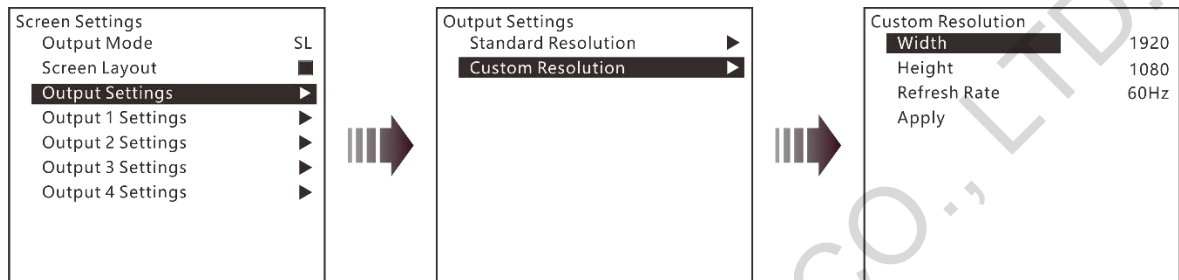

Figure 4-7 Custom resolution

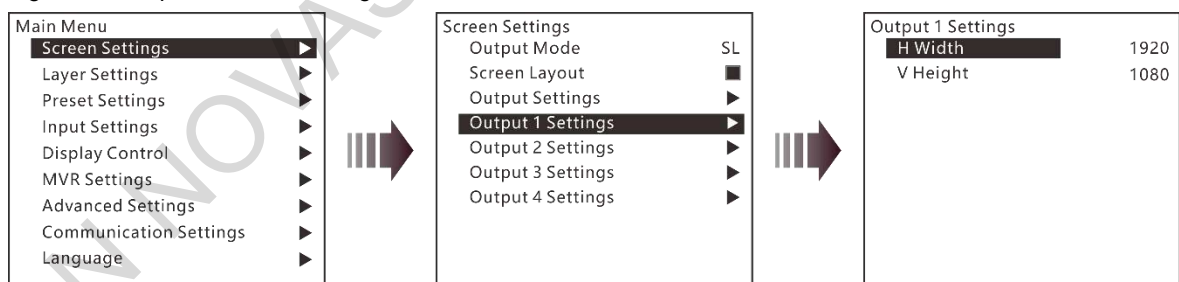

Rotate the knob to select a standard resolution, and press the knob to confirm the selection. Rotate the knob to adjust the custom resolution or use the number buttons on the front panel to enter a custom resolution. After the resolution is set, rotate the knob to select **Apply** to make the settings take effect.

4.3.4 Output Connector Settings

Output 1/2/3/4 settings allow you to set the width and height of the screen area loaded by an output connector.

- When two or more connectors are used together for horizontal mosaic output, the height change for one connector will apply to both or all connectors, but the width for a single connector can be changed.
- When two or more connectors are used together for vertical mosaic output, the width change for one connector will apply to both or all connectors, but the height for a single connector can be changed.

Figure 4-8 Output connector settings

4.4 Layer Settings

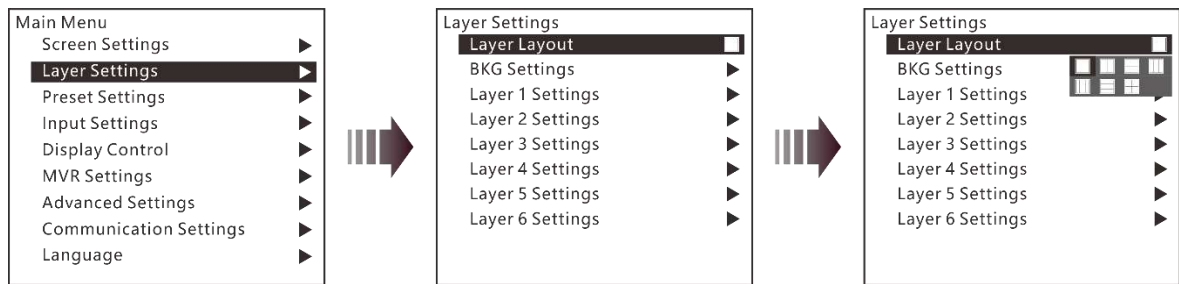

The J6 supports one BKG and six independent layers. You can set the layer layout simply by selecting a layout from **Layer Layout** or set the parameters for each layer.

On the main menu screen, go to **Layer Settings > Layer Layout** to enter the layer layout settings screen.

4.4.1 Layer Layout

The J6 provides 7 layer layouts. You can select the desired layout in **Layer Layout**, and then all the layers will together fill the screen. The layer quantity, size and position will be set automatically according to the selected layout.

Figure 4-9 Layer layout

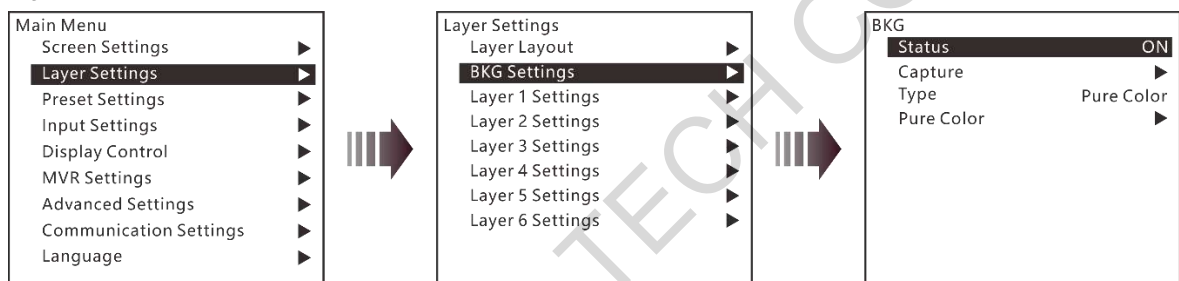

4.4.2 BKG Settings

The J6 supports BKG settings. You can load an image file from the control PC, capture an input source image displayed on the screen or select a pure color as the BKG image. BKG has the lowest priority and fills the whole screen.

On the layer settings screen, rotate the knob to select **BKG Settings** and press the knob to enter the BKG settings screen. You can turn on or turn off the BKG function.

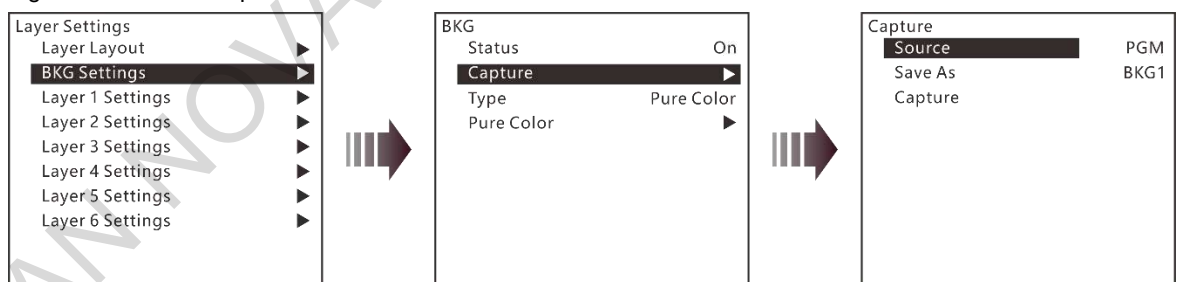

Figure 4-10 BKG

BKG Capture

You can capture the current display image on PGM or the current frame of the select input source, and save the captured image as the BKG image.

Figure 4-11 BKG capture

1. On the BKG settings screen, go to **Capture > Source** to select an input source or PGM.
2. Rotate the knob to select **Save As** to save the captured BKG image to a specified location.
3. Rotate the knob to select **Capture** and press the knob, then the system will automatically capture the current frame of the image and save the captured BKG image to the specified location.

Note:

If a BKG image already exists in the selected location, the captured BKG image will overwrite the existing one.

BKG Image

The J6 supports up to 6 BKG images. You can load an image file from the control PC or C1 event controller, or capture an input source image displayed on the screen as the BKG image.

1. On the BKG settings screen, set the BKG type to **Image**.

2. Rotate the knob to select **Image** and press the knob to enter the BKG image selection screen.
3. Rotate the knob to select a BKG image and press the knob to apply the selected BKG image to PVW.

Figure 4-12 BKG image

Pure Color BKG

The J6 supports pure color BKG. When the BKG type is **Pure Color**, you need to set the individual R, G and B value for the pure color BKG.

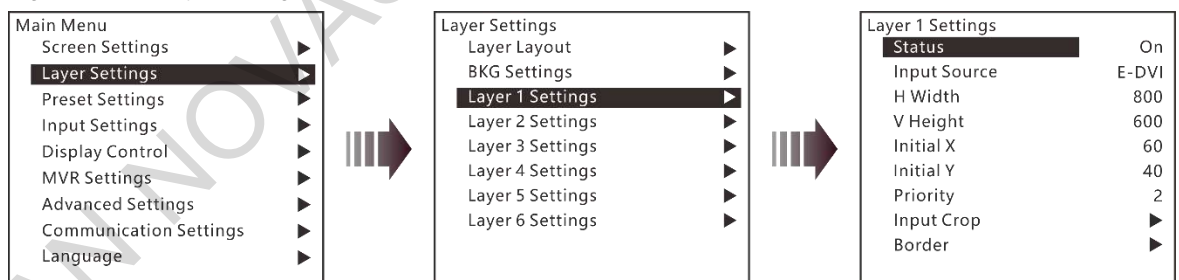

Figure 4-13 Pure color BKG

4.4.3 Layer Settings

The J6 supports 6 layers. The input source, size, position, priority and input cropping of each layer can be set. Here take **Layer 1** as an example to illustrate.

Figure 4-14 Layer settings

- **Status:** Open or close the layer.
- **Input Source:** Set the input source for the layer.
- **H Width:** Adjust the layer width. The default value is 800.
- **V Height:** Adjust the layer height. The default value is 600.
- **Initial X:** Adjust the initial horizontal coordinate of the layer. The default value is 0.
- **Initial Y:** Adjust the initial vertical coordinate of the layer. The default value is 0.
- **Priority:** Set the displaying order of the layers. The range is 1–6, and 6 indicates the layer is at the top.
- **Input Crop:** Crop the input source image and make the cropped part display in the whole layer area.

- Layer 1 Input Crop: Turn on or turn off the input crop function for Layer 1.
- H Width: Set the width of the desired part as shown in the above figure.
- V Height: Set the height of the desired part as shown in the above figure.
- Initial X: Set the horizontal initial coordinate of the cropped part upon the current input source with the top left corner as the reference point, which is shown in the above figure.
- Initial Y: Set the vertical initial coordinate of the cropped part upon the current input source with the top left corner as the reference point, which is shown in the above figure.
- Border: Set the layer border type and color.
 - Status: Turn on or turn off the layer border.
 - Type: Set the layer border type. The options are **Inner** and **Outer**.
 - Color: Set the layer border color. Nine pure colors are provided. When you want to customize the border color, you can define the color by adjusting the individual R, G and B colors.
 - Reset: Reset all the border parameters to defaults.

Note:

When you set the border color to one of the provided pure colors, R, G and B color adjustment is not supported.

4.5 Preset Settings

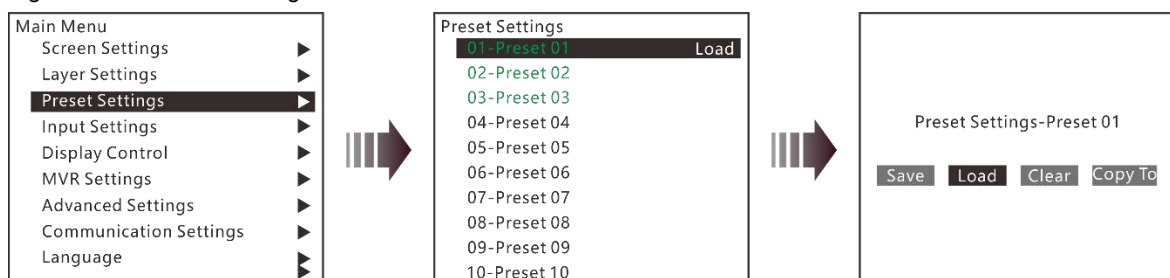

The J6 supports up to 32 presets. After the layer settings are complete, you can save the settings as a preset and load the preset. When the preset name is in green, the current preset has data and can be loaded, cleared or copied.

Rotate the knob to select a preset and press the knob to enter the preset settings screen.

- Save: Save the current layer settings to a target preset.
- Load:
 - When the **System Mode** is **Splicer**, you can load the current preset to the screen.
 - When the **System Mode** is **Switcher**, you can load the current preset to PVW.
- Clear: Clear all the data in the selected preset.
- Copy To: Copy a saved preset to a new preset.

Rotate the knob to select a saved preset, and press the knob to enter the preset settings screen. Select **Copy To** and press the knob to select a target preset location to complete the saving action. After copied successfully, the newly-saved preset turns green.

Figure 4-15 Preset settings

4.6 Input Settings

On the input settings screen, you can set the input resolution. The standard resolution and custom resolution are both supported.

Figure 4-16 Standard resolution

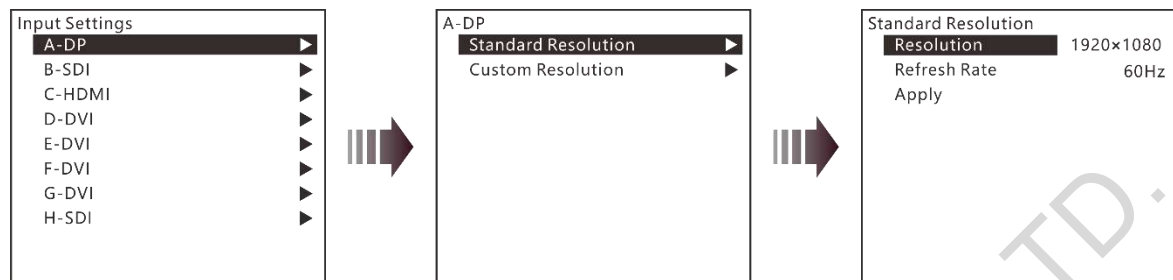

Figure 4-17 Custom resolution

Note:

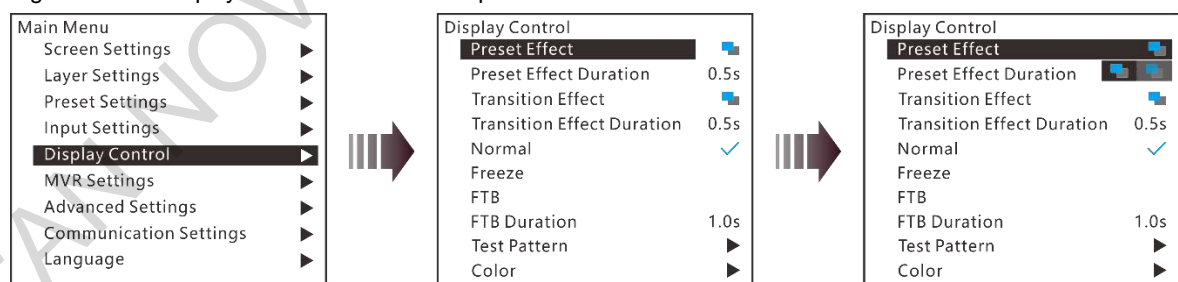

The SDI connector does not support input resolution settings.

4.7 Display Control

Display control allows you to control the output display style and transition. The submenus vary according to different system modes.

- When the **System Mode** is **Splicer**, the menu is shown in Figure 4-18.

Figure 4-18 Display control submenus for Splicer mode

- **Preset Effect:** Set the effect for switching preset. Fade and cut effects are supported.
- **Preset Effect Duration:** Set the duration for switching preset. The range is 0.50s–2.00s and the default value is 0.50s.
- **Transition Effect:** Set the effect for layer image switching. Fade and cut effects are supported.
- **Transition Effect Duration:** Set the duration of the transition effect. The range is 0.50s–2.00s and the default value is 0.50s.
- When the **System Mode** is **Switcher**, the menu is shown in Figure 4-19.

Figure 4-19 Display control submenus for Switcher mode

- **Take:** Send PVW to PGM.
- **Take Effect:** Set the effect when sending PVW to PGM. Fade and cut effects are supported.
- **Take Effect Duration:** Set the duration for Take effect. The range is 0.50s–2.00s and the default value is 0.50s.

Normal

Exit the freeze or FTB mode and display the image normally.

Freeze

Freeze the current frame of the output image.

FTB

- **FTB:** Make the output image fade to black.
- **FTB Duration:** Set the time length of the whole FTB process. The range is 0.0s–2.0s and the default value is 1.0s.

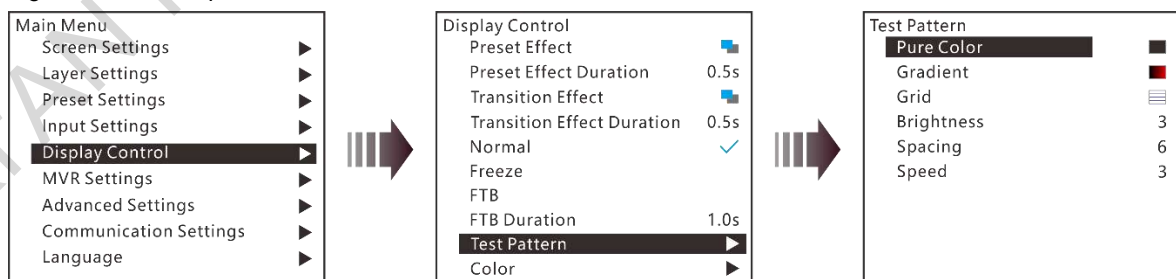

Color

Adjust the brightness, contrast, saturation and hue of the input, layer and output image.

Test Pattern

You can test whether the screen can display the output image color normally by comparing the displayed image with the test pattern. On the main menu screen, go to **Display Control > Test Pattern** and press the knob to enter the test pattern settings screen.

Figure 4-20 Test pattern

- **Pure Color**
Test whether the screen can display the color normally. The J6 provides 8 pure colors.
- **Gradient**
Test whether the screen can display the image normally. The J6 provides 8 gradients.
- **Grid**

Test whether there are uncontrollable pixels on the screen. The J6 provides 6 grids.

- Brightness

Set the brightness of the test pattern. The range is 1–4 and the default value is 3.

- Spacing

When the test pattern is **Gradient** or **Grid**, you can set the spacing. The range is 1–8 and the default value is 5.

- Speed

When the test pattern is **Grid**, you can set the moving speed. The range is 1–4 and the default value is 3.

4.8 MVR Settings

You can set to monitor a single input source, PVW or PGM. All the input sources, PVW and PGM are monitored by default.

Step 1 On the main menu screen, rotate the knob to select **MVR Settings**.

Step 2 Press the knob to enter the MVR settings screen where you can learn how to select an output image for MVR.

Figure 4-21 MVR settings

Step 3 Rotate the knob to select a single input source, PVW or PGM and press the knob to display the selected one in full screen.

Step 4 Press the knob again to exit the full screen display and go back to monitor all the input sources, PVW and PGM.

4.9 Advanced Settings

On the main menu screen, rotate the knob to select **Advanced Settings** and press the knob to enter the advanced settings screen. You can set the system mode, sync mode, Fn button function, go homepage time, factory reset and HDCP function, as well as view the hardware version and company-related information.

Figure 4-22 Advanced settings

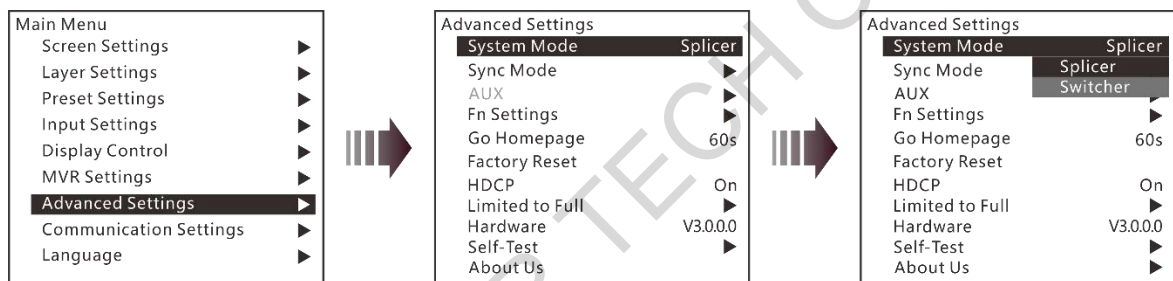

4.9.1 System Mode

The J6 supports two system modes: **Splicer** and **Switcher**. When a different system mode is selected, the device loading capacity and operations are also different.

- **Splicer**: All the operations to the layers will be displayed on the LED screen simultaneously.
- **Switcher**: All the operations to the layers will be firstly displayed on the PVW, and then sent to the LED screen from the PVW by using the TAKE button after you have completed the editing.

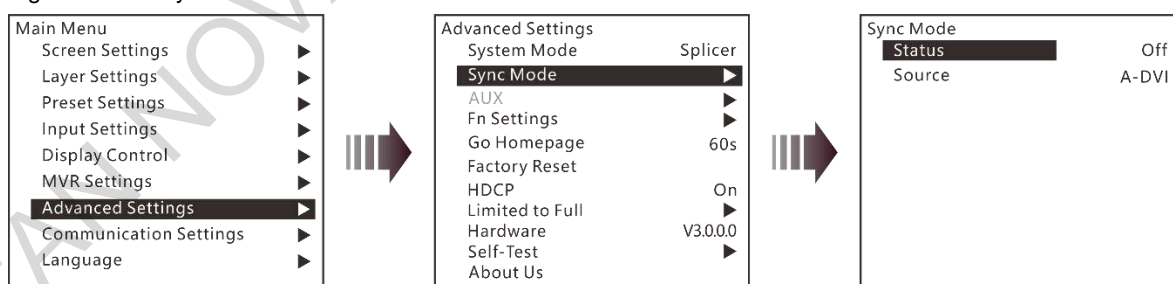

Figure 4-23 System mode

4.9.2 Sync Mode

- **Status**: Turn on or turn off the sync mode. The function is turned off by default.
- **Source**: Rotate the knob to select an input source as the target sync source.

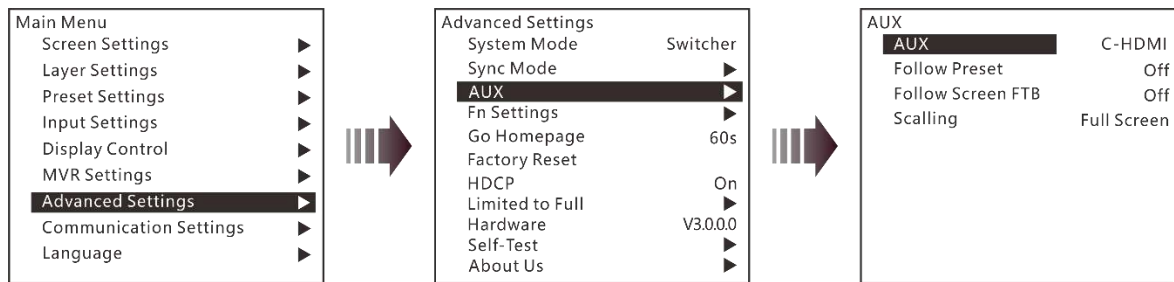

Figure 4-24 Sync mode

4.9.3 AUX

When the system mode is **Switcher**, the J6 supports AUX settings, allowing you to set one input source as the AUX input source.

Figure 4-25 AUX

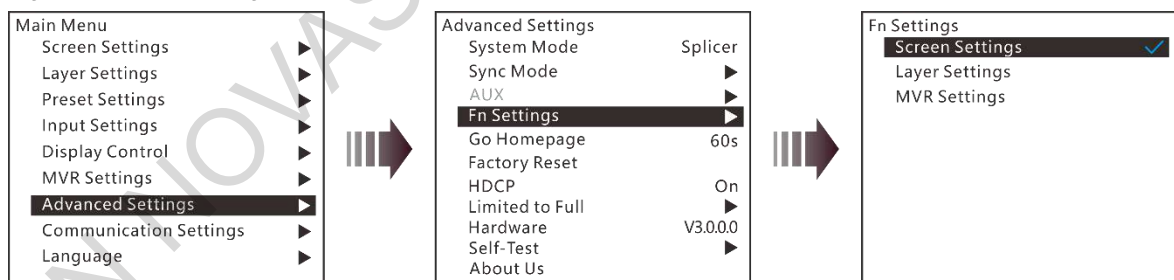

- **AUX:** Select the AUX input source.
- **Follow Preset:** Set whether the AUX data follow the preset switching.
 - On: If the preset has AUX data, the AUX will be switched automatically during preset switching.
 - Off: The AUX will not be switched during preset switching.
- **Follow Screen FTB:** Set whether the AUX output follows the main screen to perform FTB.
 - On: Turn on the function and the AUX will follow the screen FTB.
 - Off: Turn off the function and the AUX will not follow the screen FTB and will output normally
- **Scaling:** Set the AUX output display.
 - Full Screen: Display the image in full screen of the AUX display.
 - Proportional: Scale the image proportionally and then display it on the screen.

4.9.4 Fn Settings

When a different system mode is selected, the Fn button function may vary. In **Splicer** mode, after you have completed the Fn settings, press the Fn button to enter the settings screen of the function that you have set for the button. In **Switcher** mode, after you have completed the Fn settings, press the Fn button to send PVW to PGM.

- In splicer mode, the Fn button can be set as the shortcut button for **Screen Settings**, **Layer Settings** or **MVR Settings**.

Figure 4-26 Fn settings

- In switcher mode, the Fn button can be set as the shortcut button for switching between PVW and PGM. Take and Swap modes are supported.
 - **Take:** Press the Fn button to send PVW to PGM. The images on PVW and PGM are the same.
 - **Swap:** Press the Fn button to swap the images displayed on PVW and PGM.

Figure 4-27 Fn settings

4.9.5 Go Homepage

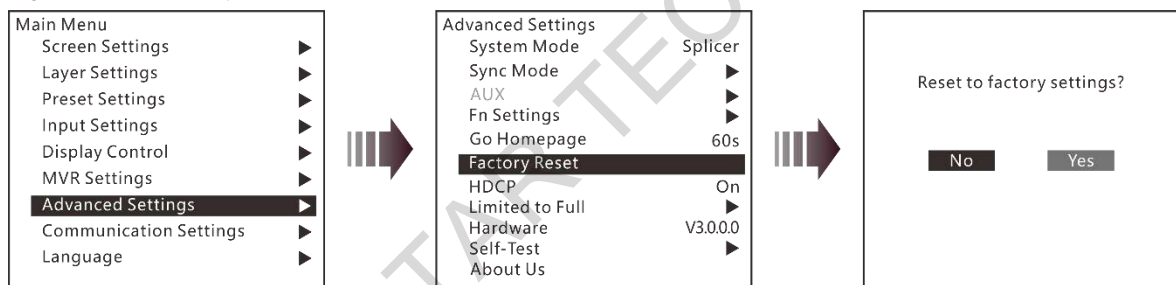

You can set the time during which the system stays at the current page before returning to the homepage automatically when there is no operation performed.

- Range: 30s–3600s
- Default value: 60s

4.9.6 Factory Reset

When you need to clear all the user data in the device, you can select **Factory Reset** to reset the device to factory defaults.

Figure 4-28 Factory reset

4.9.7 HDCP

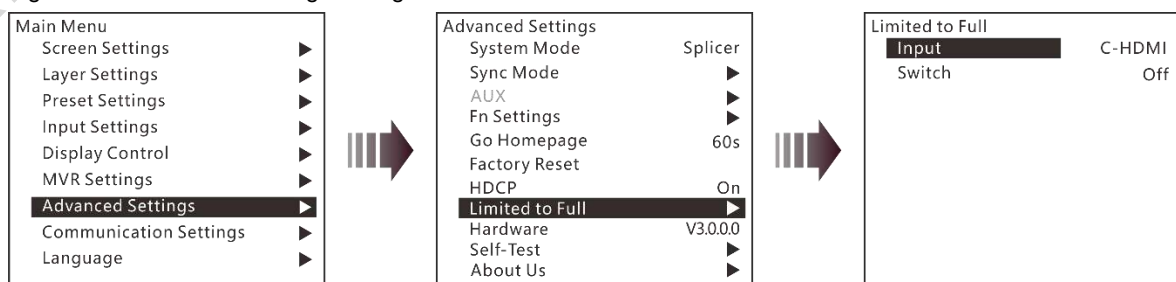

The HDCP function is available for HDMI and DVI input connectors.

- On: Enable the HDCP function.
- Off: Disable the HDCP function.

4.9.8 RGB Color Range Converting

This function can automatically convert the limited RGB color range to full RGB range for the input source, so the device can process the source precisely.

Figure 4-29 RGB color range settings

Step 1 Select an input source to be converted.

Step 2 Turn on the function.

- Off: Turn off the limited to full converting function.
- On: Turn on the function. It is recommended you turn on the function when the input source has a limited RGB color range.

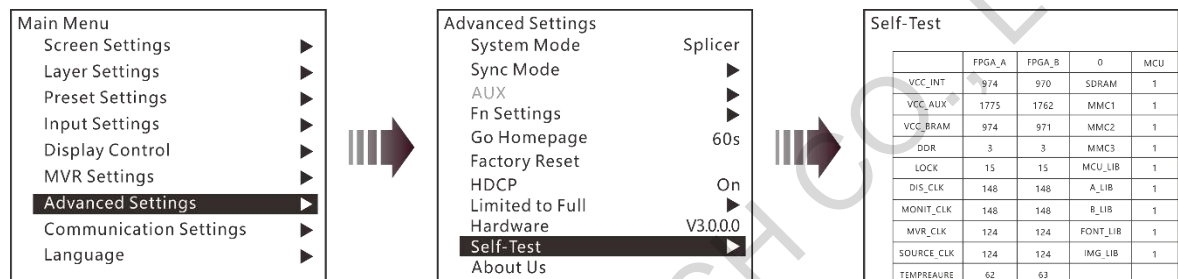

4.9.9 Hardware Version

You can view the current device version.

4.9.10 Self-Test

The J6 supports the diagnostics function to check the working status of the device. You can send the test result to the technical staff of NovaStar to help resolve the problem quickly.

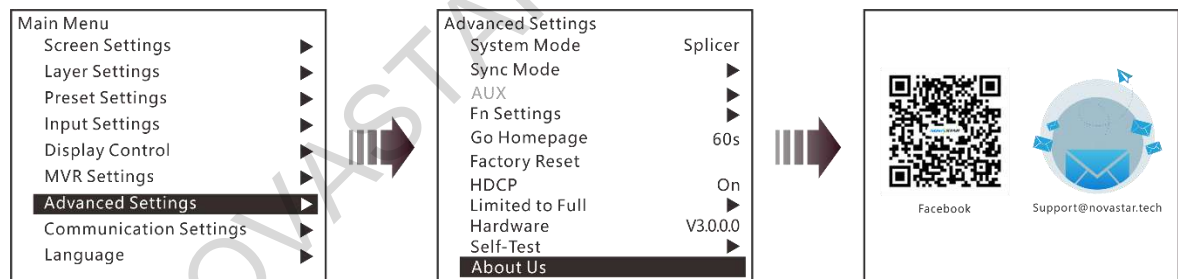

Figure 4-30 Self-Test

4.9.11 About Us

You can view the Facebook and email address of NovaStar.

Figure 4-31 About us

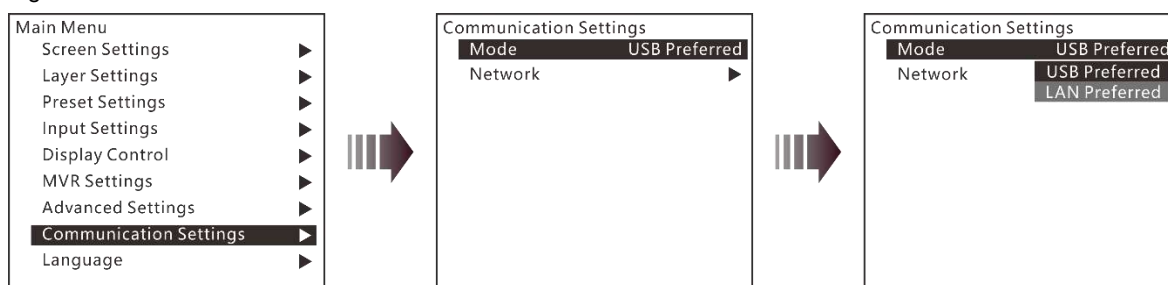

4.10 Communication Settings

On the main menu screen, rotate the knob to select **Communication Settings** and press the knob to enter the communication settings screen.

Communication Mode

When the device is connected to the control PC via both USB and LAN cables, you can select **LAN Preferred** (default) or **USB Preferred**. When **LAN Preferred** is selected, the J6 is controlled by the control PC via the LAN cable. When **USB Preferred** is selected, the J6 is controlled by the control PC via the USB cable.

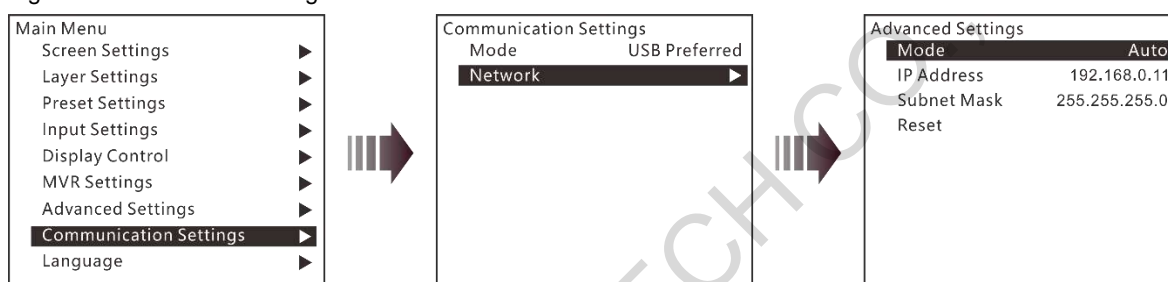

Figure 4-32 Communication mode

Network Settings

When the device is connected to the control PC via a router, you need to set the **IP Address** and **Subnet Mask** to enable communication between the device and control PC.

Figure 4-33 Network settings

When **Mode** is set to **Auto**, the **IP Address** and **Subnet Mask** cannot be set, but will be assigned by the router. When **Mode** is set to **Manual**, you can set the **IP Address** and **Subnet Mask**. Please note that the device IP address cannot be the same as the IP addresses of other devices to avoid network conflict.

You can select **Reset** to reset the **IP Address** and **Subnet Mask** to the defaults.

4.11 Language

You can switch the device UI language. Currently English and Simplified Chinese are supported.

5 V-Can Control

V-Can is a smart control platform for video processors and all-in-one controllers. Thanks to its intuitive UI design and simplified operations, V-Can allows you to easily control and manage all the connected devices.

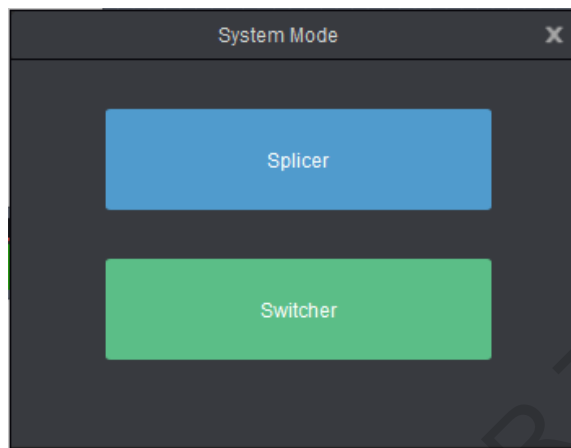

- Step 1 Perform the device connections described in 3 Applications, then V-Can will automatically connect to the J6.

Note:

When multiple J6 units are connected to V-Can, the control PC where V-Can is installed must be on the same LAN with the J6 units. V-Can will automatically search all the J6 units on this LAN and connect all of them.

- Step 2 Go to **Settings > System Mode** to pop up the **System Mode** dialog box, then select the desired system mode.

Figure 5-1 System mode

- Step 3 Set the J6 output connector mosaic layout according to the actual screen.
1. Click **Settings** to enter the settings screen.
 2. Click **Mosaic Layout** to select the desired layout.
 3. Click **Output** to enter the output settings screen.
 4. Under the **Output** tab, set the output connector resolution and screen size according to the screen resolution.
- Step 4 Set the input resolution and color.
1. Click **Settings** to enter the settings screen.
 2. Click **Input** to enter the input settings screen.
 3. Under the **Input** tab, click the drop-down arrow next to **Source** to select an input source, and then select **Standard** or **Custom** to set the input resolution.
 4. Under the **Color** tab, set the input color.
- Step 5 Add layers.
- In **Splicer** mode, click and drag a signal source to the PGM and then release it to add an 800×600 layer. Drag the layer to change its position, and drag the layer edge or corner to change its size.
 - In **Switcher** mode, click and drag a signal source to the PVW area and then release it to add an 800×600 layer. Drag the layer to change its position, and drag the layer edge or corner to change its size.
- Step 6 In **Switcher** mode, click **TAKE** or **CUT**, or push T-Bar to send PVW to PGM.

Note:

V-Can allows you to set the layer layout, size, color and crop the layer. For details, please refer to *V-Can User Manual*.

6 C1 Control

The C1 event controller is a hardware console of NovaStar specifically designed for video processing products. The C1 adopts a dual LCD screen design. The left one performs the input and output monitoring for the J6. The right one, together with the front panel buttons, allows you to perform operations and control of the J6.

When you need to control the J6 via the C1 event controller, you must switch the system mode to **Switcher**.

- Step 1 Perform the device connections for Switcher mode described in [3 Applications](#).

Note:
When multiple J6 units are connected to the C1, the C1 must be on the same LAN as the J6 units.

- Step 2 On the home screen, click **Configuration** to enter the configuration page, and then click **Search**.

Figure 6-1 Searching for devices

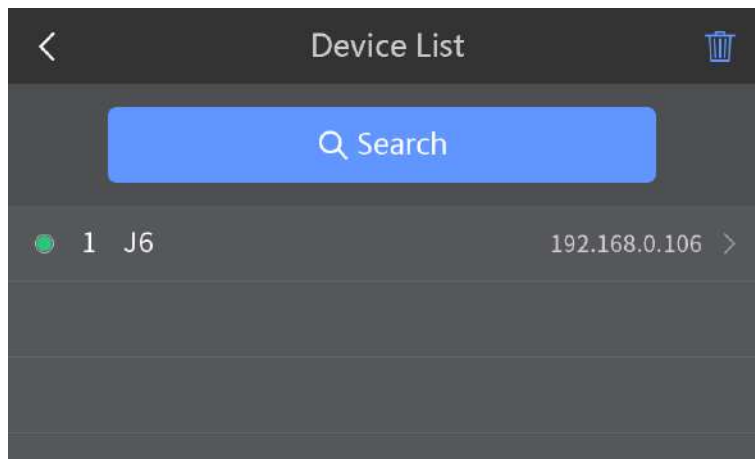

- Step 3 On the right touch screen, select the devices to be added and then click **Add**.

Figure 6-2 Adding devices

Cancel	Add List		Add
<input checked="" type="radio"/>	1	J6	192.168.0.106
<input type="radio"/>	2	J6	192.168.0.107
<input type="radio"/>	3	J6	192.168.0.108
<input type="radio"/>	4	J6	192.168.0.109
<input type="radio"/>	5	J6	192.168.0.110

After the devices are added, you can view the information of those added devices on the **Device List** page, as shown in the figure below.

Figure 6-3 Device list

Step 4 Tap  next to the device IP address to enter the device properties screen.

Figure 6-4 Device properties

- Input: Set the input resolution and input color.
- Output: Set the output resolution and output color.
- Easy Mosaic: By entering the screen width and height, the system will come up with a mosaic plan automatically. You can also press the **EASY MOSAIC** button in the **FUNCTION** area on the front panel to enter this screen.
- Advanced Mosaic: This mosaic mode allows you to select a proper mosaic mode and set the mosaic screen size according to the current screen size. You can also press the **MOSAIC** button in the **FUNCTION** area on the front panel to enter this screen.

Step 5 Add layers.

1. Tap **Programming** to enter the programming screen.
2. Press the **ADD LAYER** button in the **LAYER** area on the front panel to add an 800×600 layer to the PVW.
3. Press an input source button in the **SOURCE** area on the front panel to add the input source for the added layer.

Step 6 Select a layer by pressing a layer button in the **LAYER** area on the front panel. You can adjust the layer position, size and priority by using the joystick.

Step 7 Press the **TAKE** or **CUT** button, or push T-Bar to send PVW to PGM.

Note:

For details, please refer to *C1 User Manual*.

7 Troubleshooting

Problem	Solution
LED screen is not lit	Make sure the power is properly connected and switched on, and the LED screen is connected properly and works normally.
DVI has no output image	<ul style="list-style-type: none"> • Make sure the input channel has an input image and the image is displayed correctly. • Make sure the layer is opened and accessed with a signal source, and the image is displayed correctly. • Check whether the layer is placed outside the LED screen. • Make sure the output settings are correct and whether the layer is removed from the LED screen. • Make sure the DVI output is properly connected. • If a monitor is connected, make sure the monitor supports the output resolution of the video processor. • Reset the video processor and try again to check whether there is an image output.
DVI output image is abnormal	<ul style="list-style-type: none"> • Check the output settings and make sure whether the parameters are properly set. • Check the status bar of the home screen on the LCD panel and make sure other enabled functions do not affect output parameters. • Check the connection between the DVI connector and DVI cable. • Make sure whether the current connector supports the current input resolution.
Images are not displayed normally	<ul style="list-style-type: none"> • Check the input channels of each screen to make sure these channels have input signals and the signals are displayed normally. • Make sure the parameters of each screen are set correctly.
Fade effect is abnormal	<ul style="list-style-type: none"> • Make sure the channel to be switched has an input signal. • Make sure the input source before switching and the source after switching belong to the same signal group.
Display is abnormal	<ul style="list-style-type: none"> • Make sure the video processor is properly connected. • Make sure the parameter settings of the video processor are correct. • Make sure the input signal source is normal.
